

EMC, Radio and Safety Testing Services

## **JOB DESCRIPTION**

### **Calibration Engineer**

Reporting to the Calibration Manager

RN Electronics are a leading independent UKAS accredited EMC and Radio testing laboratory, established in 1986. The business is expanding and looking to take on additional engineers to support this growth.

RN Electronics is based near Brentwood, Essex in a rural location but with excellent transport links. You will be working in a highly technical environment, calibrating our test equipment to a wide range of standards.

You will be trained by our Calibration Manager to undertake performance checks on a range of electronic test equipment to ensure its correct function.

You will be supporting a busy wireless device test laboratory with the opportunity to progress towards becoming a Radio Frequency (RF) test engineer, using technologies such as Wi-Fi, Bluetooth & 5G.

Criteria: -

- HNC (or equivalent) in Engineering or similar
- Strong electronics interest
- Good methodical problem-solving skills
- Very good written English and Mathematics skills
- Can work to deadlines
- Ability to follow Work Instructions and quality procedures
- Ability to clearly communicate with staff
- Flexibility to work overtime where requested
- Coding / programming skills

Responsibilities: -

- To perform calibration tests
- Assist the calibration manager in controlling the calibration database
- Creating calibration master documents
- Develop calibration automation software
- Assist training of new staff where required
- Maintain work instructions
